Leading The Way With Innovation

IDA8

Emergency Communication Platform

Delivering Vital Information Where It Is Needed Most

Robust and Reliable, the IDA8 system is a network based communication platform that delivers public address and emergency announcements to any speaker, zone, building, or campus with a click of a button, touch of a screen, or activation of a programmed input. Integration with analog, digital, VoIP, and SIP devices is easy and seamless with the advanced DSP and drag-n-drop configurator. Initiating the system's features is effortless whether using a touch screen paging console or the GUI interface, neither requiring a dedicated server to operate the system.

In addition to it's ease of use and versatility, the IDA8 is also reliable and durable. With supervised inputs and outputs; amplifier fault detection with automatic switch over; redundant system architecture; and 24VDC back-up power capabilities; uninterrupted operation of the facility's emergency communication system is ensured.

Easy to use, easy to install, and always operational, the IDA8 is the perfect platform for ever facility's public address and emergency communication needs.
